EDUCATION

University at Albany, SUNY

Master of Science in Data Science

2024 – 2026

Albany, New York

Vishwakarma Institute of Information Technology

B.Tech in Artificial Intelligence & Data Science

2020 – 2024

Pune, India

EXPERIENCE

Prabha Industries

AI/ML Intern – Manufacturing Analytics

Jan 2024 – Jul 2024

- Analyzed manufacturing and production data to identify operational patterns and support data-driven process improvements.
- Developed machine learning models for defect detection, enabling earlier identification of potential quality issues in production output.
- Built interactive dashboards to track production KPIs and communicate operational insights to manufacturing stakeholders.

Accutech Engineers Pvt.Ltd.

Data Engineering Intern

Aug 2023 – Dec 2023

- Developed data preprocessing and transformation workflows for structured manufacturing and operational datasets.
- Used Python and SQL to clean, validate, and analyze data for downstream reporting and analytics workflows.
- Supported data pipeline development by organizing raw operational data into analysis-ready datasets for business and engineering use cases.

OMESA Engineers & Exports Pvt.Ltd.

Operations Data Analyst – Full-Time

Jun 2022 – Jun 2023

- Analyzed production, inventory, and order data using SQL and Excel to identify operational trends and bottlenecks.
- Developed Tableau and Power BI dashboards to track production KPIs, inventory levels, downtime, and order performance.
- Automated data cleaning and reporting using Python and Pandas, improving reporting efficiency and data accuracy.
- Performed trend and variance analysis to identify production delays and inventory discrepancies, supporting operational decision-making.

TECHNICAL SKILLS

Languages & Databases: Python, SQL, Java, MySQL, PostgreSQL

AI/ML & Data Science: Machine Learning, NLP, Time Series Forecasting, Feature Engineering, Model Evaluation, Statistical Analysis

Generative & Agentic AI: RAG, LangChain, LangGraph, FAISS, Prompt Engineering, OpenAI API, MCP, LLM Evaluation

Data Engineering & Cloud: dbt, PostgreSQL, AWS (S3, EC2, Bedrock), Microsoft Azure, Docker, REST APIs

Analytics & Visualization: Pandas, NumPy, EDA, Tableau, Plotly, Matplotlib, Seaborn, Microsoft Excel

Developer Tools: Git, GitHub, Linux, Streamlit

PROJECTS

PipelineGuard | *Python, PostgreSQL, dbt, Streamlit*

2026

- Built an end-to-end data pipeline application supporting CSV ingestion, data validation, PostgreSQL storage, dbt transformations, and analytics.
- Developed staging and analytical data models and surfaced revenue, order, and operational KPIs through an interactive Streamlit dashboard.

ProofRAG – Agentic Research Answer Auditor | *Python, RAG, FAISS, Streamlit*

2026

- Built an agentic RAG system that retrieves evidence from uploaded documents, generates grounded responses, and audits answers for source support.
- Implemented document chunking, vector embeddings, semantic retrieval, citation generation, and evidence-based answer evaluation.

Manufacturing Incident Investigation System | *Python, Pandas, Plotly, Streamlit*

2026

- Developed an incident investigation platform analyzing sensor, maintenance, and incident data to identify anomalies and potential root causes.
- Implemented automated column mapping, risk scoring, maintenance correlation, and interactive visualizations for varying dataset schemas.

FIFA 2026 Player Performance Analytics | *Tableau*

2026

- Built and published an interactive Tableau dashboard analyzing player and team performance using KPIs, filters, and drill-down visualizations.

SentinelML – Real-Time Equipment Failure Prediction & ML Monitoring | *XGBoost, SHAP, MLflow, FastAPI* 2026

- Engineered an ML pipeline using XGBoost and LightGBM to predict equipment failures from real-time sensor data.
- Implemented SHAP and MLflow for prediction explainability, experiment tracking, and model performance monitoring.
- Productionized real-time failure risk scoring through FastAPI and Docker.
